Dear Readers,

Welcome to the **October 2025 edition of the HITRIplus newsletter!**

This autumn, we bring you highlights from a vibrant season of scientific exchange and collaboration across the HITRIplus community. In September, HITRIplus was showcased at the *International Conference on Medical and Biological Engineering (CMBEBIH 2025)* in Sarajevo, where Yiota Foka delivered a keynote presentation on the project's progress and growing impact in South-East Europe.

Earlier in June, our partners joined the global particle therapy community in Buenos Aires for the **63rd PTCOG Conference**—the first ever held in South America. HITRIplus presented achievements in networking, communication, dissemination, and outreach, connecting with more than 850 experts from around the world.

We also mark the **20th HITRIplus Seminar**, held on 1 October, featuring **Dr Daria Boscolo (GSI)**, who presented groundbreaking work on *radioactive ion beams* and their potential for real-time image-guided particle therapy.

As we move toward the final months of the project, these events reaffirm the strength of our community and its continued commitment to advancing innovation, education, and access to ion-beam therapy.

Thank you for following our journey and for being part of the HITRIplus network. Your engagement drives collaboration and progress across Europe and beyond.

Enjoy the read!
